Note: 1.5U CubeSats are deployed by sharing a 3U satellite dispenser, it is because of this that consultation is needed before committing to external volume beyond the 170.25 mm³.

Between the ISiS satellite dispenser systems ISiPOD and QuadPack there are small differences in maximum allowable volume, namely:

- ISiPOD allows for additional space on top.
- QuadPack allows for more volume at all lateral sides.
- Both systems can handle an even larger "luna cap" on the bottom.

The dotted additional volume allocations can only be used after consultation with and written approval from ISiS.
