## DESCRIPTION

The ISIS MagneTorQuer board (iMTQ) is a PCB based 3-axis magnetic actuation and control system for Cubesats. It is designed as a standalone detumbling system and can also be used with more advanced ADCS hardware providing actuation of  $0.2\text{Am}^2$ . In every axis, the system can be used to detumble cubesats up to a 12-unit sized system. The system can be placed in a cubesat electronics stack or in between stacks in ISIS cubesat structures. It can be controlled over digital or analog interface, and provides telemetry over I<sup>2</sup>C.

## FEATURES

- Three axis magnetometer (onboard + interface for external MTM)
- Three actuators; two torque rods and one air core torquer.
- Current sensors for each torquers
- Temperature telemetry of actuators
- Including detumbling algorithm
- Suitable to detumble up to 12U (~24kg) CubeSats
- Can be used to desaturate reaction wheels

## PERFORMANCE

- Actuation level in all 3-axis  
Nominal:  $0.2\text{ Am}^2$  (@  $20^\circ\text{C}$ , 5V)
- Maximum actuation envelope error: <5%
- Magnetometer accuracy: < $3\mu\text{T}$
- Detumbling algorithm frequency: selectable from 1Hz to 8Hz
